

Danrec A/S is nominated for the prestigious Plastics Recycling Awards Europe 2019 in the category “Product of the Year Building and Construction Materials” for its colored boards made from recycled plastics. Danrec A/S – a member of the ARAN-group – manufactures and sells DAN-Board high quality plastic.

The DAN-Board-plates are resistant to mechanical stress and high pressures and have good wear resistance. They also have high resistance to water, chemicals and biological organic liquids. Therefore, they are used, for example, as construction panels in stable construction, as flooring and soil protection in the construction industry, at events, in horticulture or as driving plates.

For customers who requires colored plates, Danrec has developed the now nominated product, which is completely made without any new plastics, although it is available in different colors.

The winners of the Plastics Recycling Award Europe 2019 will be announced on April 11th, 2019 during the Plastics Recycling Show Europe in Amsterdam.

We are very proud that our product is nominated for this award. Our colored boards made from recycled plastics deserve it because they are of high quality, have a wide range of applications and look well. At first glance, one would never believe that it is a recycled product.

Danrec A/S was founded in 1992 and was already a pioneer in the processing of recycled plastics. Even today, Danrec A/S is a leader in this field and one of the few companies that have the equipment and expertise to process recycled plastics and manufacture plastic sheets with a variety of applications.

Recently, Danrec A/S has also won the prestigious “Gazelle” award from the Danish daily newspaper Børsen, which goes to companies with exceptional growth.
